Product information: nonwovens

Nonwovens are textiles in which different natural materials are worked into. Due to these various materials in the manufacturing process, special patterns and structures become evident.

Idea & concept of the nonwovens

Every so often nature serves as the spark of inspiration that lights the fire of creative designing processes and it also can be regarded as godfather for the development of many different textiles. Countless times Mother Nature's colours, patterns and structures were pictured and copied.

I accept the challenge of trying to link nature and textiles in a way that nature itself designs the textiles due to its own unique creative power. I would like to reveal the original primary patterns of nature and fix them permanently in the textiles.

Application

The nonwovens can be applied on a small or large scale for an interior design solution. It can be used from accents to full size room installations.

The nonwovens are timeless textiles. It employs a purisitic fusion of shapes and patterns for to conquer urban living areas as a piece of modern decoration. These textiles unites simplicity and craftiness. Just like nature itself, it changes and varies its character through the seasons and shifting lights and arises anew every day.

Technical notes

Width: 0,85 m

Basic material: 100% Lenzing FR® (FR=Flame Resistant)

In the production process itself there is no use of any chemical application.
